The application has been amended as follows:

Please amend claims 97 and 101.

(claim 97--currently amended) A computer-implemented method for assembling a prescription, the method comprising:

- providing an electronic database of drugs;
- electronically storing a patient identifier in a computer memory medium;
- using a computer to dynamically assemble a patient history record as a contemporaneous record correlated with said patient identifier from multiple source record elements retrieved from multiple heterogeneous remote databases;
- using a computer to electronically associate the patient identifier with a drug benefits provider or insurance company for a patient associated with the patient identifier;

Art Unit: 3626

- using a computer to electronically access a formulary associated with the drug benefits provider or insurance company for a patient associated with the patient identifier;
- electronically identifying from the database of drugs, a list of formulary drugs approved by a drugs benefit provider for the patient associated with patient identifier;
- using a computer to electronically associate with the patient identifier, a formulary drug selected from the list of formulary drugs approved by a drugs benefit provider;
- using a computer to electronically associate a dosage for the selected drug, with the patient identifier and the selected drug; and
- retrieving and outputting the associated selected drug and dosage associated with a patient identifier.

(claim 101-- currently amended) A method for assembling an electronic prescription, comprising the steps of:

- providing an electronic database of drugs;
- electronically obtaining a patient identifier converted to electronic data;
- using a computer to dynamically assemble a patient history record as a contemporaneous record correlated with said patient identifier from multiple source record elements retrieved from multiple heterogeneous remote databases;

Art Unit: 3626

- using a computer to electronically associate the patient identifier with a drug benefits provider or insurance company for a patient associated with the patient identifier;
- using a computer to electronically access a formulary associated with the drug benefits provider or insurance company for a patient associated with the patient identifier;
- electronically retrieving from the database of drugs, a formulary list of drugs approved by a drugs benefit provider for the patient associated with the patient identifier, and the identity of at least one prescribed drug associated with the patient identifier, the at least one prescribed drug being selected from the formulary list of drugs approved by a drugs benefit provider;
- electronically retrieving a dosage for the at least one prescribed drug associated with the at least one prescribed drug and the patient identifier;
- storing the at least one prescribed drug, the dosage and the patient identifier in an electronic memory; and
- outputting at least the at least one prescribed drug.

Allowable Subject Matter

2. Claims 97-107 and 109-118 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Art Unit: 3626

- using a computer to dynamically assemble a patient history record as a contemporaneous record correleated with said patient identifier from multiple source record elements retrieved from multiple heterogeneous remote databases;
- using a computer to electronically access a formulary associated with the drug benefits provider or insurance company for a patient associated with the patient identifier;
- electronically identifying from the database of drugs, a list of formulary drugs approved by a drugs benefit provider for the patient associated with patient identifier;
- using a computer to electronically associate with the patient identifier, a formulary drug selected from the list of formulary drugs approved by a drugs benefit provider;

Claims 98-100 incorporate the allowable subject matter through dependency and are therefor also allowable.

Regarding claim 101, the closest prior art of record, Renval, Brown and Doyle, fails to teach or fairly suggest a method including the recited combination steps of:

- using a computer to dynamically assemble a patient history record as a contemporaneous record correleated with said patient identifier from multiple source record elements retrieved from multiple heterogeneous remote databases;

Art Unit: 3626

- using a computer to electronically access a formulary associated with the drug benefits provider or insurance company for a patient associated with the patient identifier;
- electronically retrieving from the database of drugs, a formulary list of drugs approved by a drugs benefit provider for the patient associated with the patient identifier, and the identity of at least one prescribed drug associated with the patient identifier, the at least one prescribed drug being selected from the formulary list of drugs approved by a drugs benefit provider;

Claims 102-107 and 109-118 incorporate the allowable subject matter through dependency and are therefor also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
